

Supplementary Figure 1:

Supplementary Figure 1: Schematic representation of the phagemid pDST22

In addition to the elements shown in **Figure 1**, the filamentous phage replication origin (*Ff ori*), the *lac* repressor gene from *E. coli* (*lacI*) producing *lac* repressor needed for the control of the *lacZ* p/o, the ColE1 origin of replication (*ColE1 ori*) for bacterial replication of the vector, the antibiotic resistance gene (*cat*) encoding a chloramphenicol acetyltransferase conferring chloramphenicol resistance, and the restriction sites *XbaI*, *BamHI*, *PstI*, and *EcoRI* are depicted.
